

Harness the power and utility of Microsoft technology. Microsoft Practice solutions enable customers to implement Microsoft products more efficiently and achieve better utilization of key Microsoft technologies.

#### ■ EXCHANGE SERVICES

Email is essential to the life of any organization, and we help you better leverage yours by providing a range of Exchange implementation services, along with hosted and managed Exchange 2003/7 services.

The right technology with the right people means a reduction of the complexities that come from Exchange implementations. That keeps your people doing what they do best—producing results.

We help organizations that require standard Exchange functionality with **Hosted Services**. This cost-effective solution offers rapid deployment and a suite of optional services to complement complete Exchange operation, including spam filtering and mobile device access.

Upgrade to the next level with **MoreDirect Managed Services**: an enterprise-class managed email solution that combines an on-premises appliance with 24 x 7 remote managed services. This fusion ensures greater than 99.9% high availability, continuous operation, and optimized performance of your Microsoft Exchange 2003 or 2007 environments. Peace of mind comes standard as world-class Exchange experts analyze nonproprietary customer information to keep your system in peak condition. Managed Services will deliver secure, end-to-end support for every Exchange 2007 appliance.

**Exchange Integration** offers migration assistance from a prior version of Exchange, Lotus Notes, or Groupwise. Maximize your investment with custom services that keep you running smoothly.

#### ■ SHAREPOINT DESIGN/IMPLEMENTATION

Coordinating Web services within an organization and between outside partners can be difficult. SharePoint Server 2007 is Microsoft's latest technology that offers you an improved method of sharing mission-critical data: collaborate both internal and external communications. Certified engineers support the implementation of this solution with assessments and custom integration services. Tailor-made architecture and deployment packages mean you save time and money.

We will:

- **Design** your SharePoint site to fit your needs and match the individualized goal of your organization.
- **Develop** a customized application to include functionality, collaboration, and social computing.
- **Deploy** SharePoint to provide you with the highest level of performance. Configuration and implementation services help smooth the transition by providing additional software and hardware installation and recommendations.

#### ■ SOFTWARE ASSET MANAGEMENT

An aggressive system to track and maintain software licenses means improved efficiency and an infrastructure for the future. Our asset management solution delivers best-in-class optimization of your spending budget with a custom solution. Services include Lifecycle SAM Consulting, Software Auditing, License Management, SoX Controls Implementation, Software Deployment, and Asset Management (tools and deployment). This package offers operational processes which ensure effective management, compliance, and deployment to benefit your entire infrastructure today and beyond.
